

CFR INSULATED METAL ROOF PANEL

Metl-Span's CFR roof panel is the newest innovation in all-in-one composite panel design.

The CFR roof panel provides exceptional benefits including:

- The field-tested and proven Tuff-Cote™ system provides an extremely durable impact and abrasion-resistant coating that withstands severe weather conditions.
- One-step installation process providing a rapid completion of the roof system. Factory fabricated composite panels are attached directly to the supporting structure. The multiple steps to separately lay down a deck, vapor barrier, insulation and a metal panel or membrane are eliminated.
- Standing seam exterior face for unsurpassed weather tight performance
- Factory cut panel ends, factory notching and factory swaged ends eliminate extensive field reworking and reduce erection costs
- Savings extend to the environment. Energy bills are cut drastically because of the superior insulation values
